Infrared Booster Ovens

ITW BGK Finishing Systems high intensity electric infrared booster ovens offer an efficient method to increase production or transition from liquid to powder on your existing production line. Our modular infrared booster oven designs can be installed outside or inside your convection oven without modifying your line.

When used in powder applications, the infrared booster oven allows the powder to flow, eliminating loose powder contamination.

Increased Line Speeds

Instant On/Off Emitter Control

Multiple Zones of Control

Modular Design

Use with All Coating Types

Short Wave Infrared = Rapid Heating = Reduced Floor Space
